1. Overview

The **Hotel Planner Points** module tracks loyalty-program rewards earned for booking events at hotel properties. It covers seven chains out of the box: **Marriott Bonvoy**, **World of Hyatt**, **Hilton Honors**, **IHG One Rewards**, **Omni Select Guest**, **Choice Privileges**, and **Sonesta Travel Pass**.

Each booking that earns points becomes a **points request** — a single tracked record that follows the submission from generation through email send-off and final point posting. Overdue requests automatically appear on the Status Board.

Before this module, the workflow lived in five separate Excel workbooks (one per chain, year-tabbed) plus per-event Word forms filled in by hand. Points could lapse if not submitted within each chain's window (Hyatt: 30 days post-signature; Marriott/Hilton: 90 days post-event). The module brings the entire workflow into one place.

2. Concepts & Workflow

The two key tables

Programs — one row per hotel chain. Holds your loyalty number for that chain, the submission type (.docx template, web form, or manual), an uploaded blank template, and a mapping of form-field labels to data sources.

Requests — one row per (pickup event × chain). Holds the form-sent date, hotel salesperson, points-received date, points awarded, status, and notes.

Lifecycle of a request

- 1 Upload the hotel contract on the pickup event detail page.
- 2 A **Generate Points Request** button appears for chains we recognise.
- 3 Click it — the request is created with status **Pending**.
- 4 Download the filled .docx (or open the chain's web-form helper) and email it to the hotel salesperson.
- 5 Record the Form Sent Date — status auto-bumps to **Submitted**.
- 6 When the hotel posts points, record the date and amount — status auto-bumps to **Received**.
- 7 If the event ended 60+ days ago and points have not been received, the Status Board raises a **Hotel Points Not Received** alert.

3. First-Time Setup

Two pieces of data must be entered before the module is useful: your **User Profile** and your **chain configurations**. Both live in the app — no command-line work required.

3.1 Promagent — Single User Profile

Promagent is a single-user app. The User Profile holds the data that gets stamped onto every points form: Peter's full name, business email, and business phone.

- 1 Click **Settings** in the navigation bar.
- 2 Find the card titled **User Profile — Hotel Points Forms**.
- 3 Fill in **Full Name**, **Email Address**, and **Business Phone**.
- 4 Click **Save Profile**.

Promagent seeds this profile with Peter's details on first run. Edit them if anything is incorrect — every Marriott, Hyatt, Hilton, IHG and Omni request from then on uses these values.

3.2 CPAinc — Default Recipient + Per-User Loyalty

CPAinc is a multi-user app, but **all hotel planner points default to Kristin House**. Every points form generated from CPAinc fills its primary block with Kristin's name, email, phone, and chain-specific member number — regardless of who is logged in when the request is created.

Each team member still records their own loyalty info — those records sit dormant until a future point-splitting feature ships. Today they exist so the data is ready when that feature lands.

Setup steps (one-time, all users)

- 1 Click **Settings** in the navigation bar.
- 2 Find the card titled **My Hotel Points Loyalty Info — <Your Name>**.
- 3 Confirm or correct **Full Name**, **Email**, and **Phone** (name and email pre-fill from your user record).
- 4 Enter your member numbers for any of the seven chains you belong to (**Marriott Bonvoy #**, **World of Hyatt #**, **Hilton Honors #**, **IHG One Rewards #**, **Omni Select Guest #**, **Choice Privileges #**, **Sonesta Travel Pass #**). Blank is fine.
- 5 Click **Save My Loyalty Info**.

Setup steps (admin only — once)

- 1 On the Settings page locate the card **Default Hotel Points Recipient**.
- 2 Confirm the recipient is **Kristin House** (default).
- 3 To change it later (e.g. team reorganisation), pick a different active user from the dropdown and click **Save Default**.

Important: Setting the default recipient does NOT move historical points. It only changes whose info is filled into *future* requests. Records already created continue to show whoever was the recipient at the time of generation.

How CPAinc fills a form

When any user generates a points request in CPAinc, the module:

- Reads **Settings** → **hotel_points_default_recipient_user_id** (Kristin's id by default).
- Loads that user's **user_loyalty_profile** row.
- Fills the form's primary block with the loaded full name, email, phone.
- Uses the recipient's **<chain>_number** column if set, else falls back to **Manage Programs** → **Member Number** for the chain.

*There is also a legacy **User Profile — Hotel Points Forms** section in older versions of Settings that holds three free-text fields. It remains as a fallback if the default recipient's profile is blank, but should not be needed once Kristin's loyalty info is filled in.*

3.3 Configure Each Chain

Open **Hotel Points** → **Manage Programs**. You will see all seven chains pre-seeded. Click **Edit** next to each one.

Fields on the Edit Program page

Field	What to enter
Member Number	Promagent: your loyalty number for this chain (e.g. Bonvoy 009986902). CPAinc: optional fallback — the
Submission Type	.docx auto-fill, Web form, or Manual. Pre-set sensibly per chain.
Form URL	For web-form chains, the public submission URL (Hilton + IHG defaults already loaded).
Submission Window (days)	Days after event end before request is overdue. Defaults: 30 for Hyatt, 60 for IHG, 90 for everyone else.
Receipt Window (days)	Days after the form was sent before posting is expected. Default: 60.
Active	Tick to use this chain. Untick to hide it from generation.
Notes	Free-text reminders specific to this chain (e.g. cutoff rules).
Form Template (.docx)	Blank Word template for chains that auto-fill (Marriott, Hyatt).
Field Mapping (JSON)	Tells the auto-fill which template label maps to which data point. Pre-seeded for Marriott and Hyatt.

Defaults that ship in the box

Chain	Submission Type	Form URL	Window
Marriott	.docx auto-fill	—	90 days
Hyatt	.docx auto-fill	—	30 days
Hilton	Web form	hiltonsales.my.site.com	90 days
IHG	Web form	forms.office.com (IHG)	60 days
Omni	Manual	—	90 days
Choice	Manual	—	90 days
Sonesta	Manual	—	90 days

Uploading a .docx template

For Marriott and Hyatt — both of which auto-fill — upload the chain's blank Word form. The module will reuse this template every time you generate a request for that chain.

- 1 Get the latest blank form (e.g. the current ConferenceDirect Bonvoy Events form).
- 2 On the Edit Program page, click **Choose File** next to "Upload new template".
- 3 Pick the .docx file and click **Save Program**.
- 4 Confirm "Current template" now shows the filename.

3.4 Field Mapping

The **Field Mapping** field is a JSON object. Each key is a label that appears in the .docx form (or as a form field on the web page). Each value is one of the data keys the module knows about. For Marriott and Hyatt this is already filled in — you only need to change it if the hotel updates their form template and adds or renames fields.

Available data keys

Key	Sourced from
user_full_name	Settings → User Profile
user_email	Settings → User Profile
user_phone	Settings → User Profile
member_number	Program → Member Number
today	Auto: today's date
hotel	Pickup event → Hotel
hotel_contact_name	Pickup event → Hotel Contact
event_name	Pickup event → Event Name
client_organization	Pickup event → Organization
event_start / event_end	Pickup event
meeting_dates_formatted	Auto: "10/6 – 10/9, 2026"
cvent_rfp_code	Request → Cvent RFP Code
contract_signature_date	Request → Contract Signature Date
total_contracted_rooms	Sum of pickup config's contracted block
peak_rooms / total_room_nights	Booking record

4. Generating a Points Request

Once setup is done, the workflow per booking is short. The trigger lives on the existing Pickup Event detail page — no separate flow to remember.

Prerequisite

You must first upload the hotel contract on the pickup event. The Generate Points Request button only appears *after* Download Contract — that way we always have a contract on file to reference if the hotel pushes back.

Steps

- 1 Open **Pickup Tracking** in the navigation bar.
- 2 Click the event you want to claim points on.
- 3 Confirm the contract is uploaded (the **Download Contract** button is visible).
- 4 Click **Generate <Chain> Points Request** next to it.
- 5 Confirm the prompt.
- 6 You are redirected to the request detail page.

Chain detection — The module recognises the chain from the hotel name (e.g., "Detroit Marriott at Renaissance Center" → Marriott). If you see no button, the hotel name does not match any known chain — open **Manage Programs** to add a custom entry, or edit the hotel name on the pickup event to include the chain.

CPAinc — who gets the points? No matter which team member clicks Generate, the form fills with the **Default Recipient's** info (Kristin House by default). To change the recipient permanently, an admin updates Settings → Default Hotel Points Recipient. Per-request splitting is not yet supported — see section 8 for the workaround.

4.1 .docx Chains (Marriott, Hyatt, Omni, Choice, Sonesta)

On the request detail page you will see a green button: **Generate & Download .docx**. Click it.

- 1 Word opens with the chain's form pre-filled with your profile, the hotel, event name, dates, Cvent RFP code, contract signature date, and member number.
- 2 Verify each field. Adjust anything that needs human judgement (e.g. Marriott's Incentive/Promotional/Signing Bonus checkbox).
- 3 Save the .docx locally.
- 4 Click **Open Email to Hotel** on the request detail page. Your default mail client opens with the salesperson's address, a polite subject, and a body that already lists the event details.
- 5 Attach the .docx you just saved.
- 6 Send.

- 7 Back in the request detail, set **Form Sent Date** to today and click **Save Changes**. The status auto-bumps to **Submitted**.

Why two steps? The mailto: URL standard does not support attaching files programmatically. Downloading the .docx and attaching it manually is the most reliable cross-platform behaviour.

The Marriott form has a 2nd-Recipient block for splitting points. The module detects the "2nd Recipient" header and intentionally leaves those cells blank — fill the 2nd-Recipient fields on the request detail page if you need to split points, and they will print into the right slots.

4.2 Web-Form Chains (Hilton, IHG)

Hilton (Salesforce) and IHG (Microsoft Forms) accept submissions only through their online portals. The module helps you fill them quickly.

- 1 On the request detail page click **Open Web Form Helper**.
- 2 A side panel renders, listing every field the hotel's form expects with the value beside it.
- 3 Click the big green **Open <Chain> Form** button — the hotel's site loads in a new tab.
- 4 For each field on the hotel's form, click the **Copy** button next to the matching value in the helper panel, then paste into the form.
- 5 Submit the hotel's form. Copy the confirmation URL it produces.
- 6 Return to the request detail. Paste the URL into **Rewards Form Link**, set **Form Sent Date**, and click **Save Changes**.

Why not real auto-fill? Both Hilton (Salesforce Lightning) and IHG (MS Forms) are heavy JavaScript SPAs whose internals change unpredictably. A copy-and-paste helper survives any redesign — the trade-off is a few extra clicks during submission.

4.3 Manual Chains

Omni, Choice, and Sonesta default to manual submission. There is no .docx and no web form; you typically write a custom email per chain. The request still gets a tracking row so the Status Board can chase you down if points never arrive.

- 1 Generate the request as normal.
- 2 Open **Email to Hotel** — the mailto: link includes event dates, room block, and your contact info.
- 3 Customise the body to include whatever the chain needs (member number, event ID, etc.).
- 4 Send, then record the Form Sent Date on the request detail.

5. Tracking & Maintenance

5.1 The Points Dashboard

Click **Hotel Points** in the navigation bar.

KPI cards (top of page)

Card	What it shows
Total Requests	Every request ever created.
Pending	Requests created but not yet sent to the hotel.
Submitted	Requests sent — waiting for points to post.
Received	Points have posted; complete.
Overdue	Event ended >60 days ago and points have not posted.
Points YTD	Sum of all points received this calendar year.

By Chain summary

A compact tile per chain shows count of requests, count received, and total points to date. Clicking a tile filters the table below to that chain.

Requests table

Sortable list of every request: chain, event, hotel, dates, sent date, received date, points, status. Filter by chain or status using the dropdowns. Rows whose event ended without points received are highlighted pink.

5.2 Marking Points Received

When the hotel posts your points:

- 1 Open the request from the dashboard, or directly from the pickup event page via the **View <Chain> Points** button.
- 2 Enter **Points Received Date** and **Points Awarded**.
- 3 Click **Save Changes**. Status auto-bumps to **Received**.

*You may also paste a hotel-side confirmation URL into **Rewards Form Link**. This is useful for chains (Hilton, IHG) that issue a tracking link rather than a posting email.*

5.3 Resending a Request

If a hotel has not posted points within the Receipt Window (default 60 days), use **Log Resend** on the request detail. This bumps a counter (visible on the button), records the date, and is your cue to regenerate the form and email it again. The original record is preserved.

5.4 Cancelling a Request

If a meeting is cancelled or the hotel disallows the claim, click **Cancel Request** on the request detail. The record is soft-deleted — status becomes **Cancelled** — so the Status Board stops flagging it but the history remains.

6. Importing Historical Tracking Workbooks

Before this module, points history lived in five Excel workbooks (one per chain, year-tabbed). The importer reads each workbook and creates one points request per row.

Steps

- 1 Open **Hotel Points** → **Import Tracking XLS**.
- 2 Pick the chain from the dropdown.
- 3 Choose the .xlsx file (e.g. "Promagent - Tracking Report Actualized Marriott for Rewards.xlsx").
- 4 Click **Preview**.
- 5 The page shows every parsed row with a Match indicator: **cfg #N** means we found the pickup config to link to; **Unmatched** means the event name did not match anything; **Dup** means a request already exists.
- 6 Review. If counts look right, click **Import N Records**.

How matching works

- Strict match: *Event Name (lowercased, trimmed) equals pickup_config's event_name.*
- Loose match: *Event Name (first 30 chars) contained in pickup_config's event_name AND start_date matches.*
- Otherwise: imported with no pickup link — still visible on the Hotel Points dashboard.

What gets imported per row

- EVENT NAME → request match key
- HOTEL → confirmed against detected chain
- START DATE / END DATE → context (used to match)
- Form Sent → form_sent_date
- Date Points Posted → either points_received_date or a status string (Cancelled, Disallowed, Not Qualified)
- Points → points_awarded
- REWARDS FORM → rewards_form_link
- Free-text columns → notes

*The importer skips **Sheet1** and **Marriott_Starwood** tabs (legacy staging). Only sheets whose names begin with a four-digit year are processed.*

7. Status Board Alerts

The existing Status Board (*navigation bar* → *Status Board*) gains a new issue type when this module is installed:

■ **Hotel Points Not Received** — Event ended N days ago — <chain> points still not received.

Triggers when **all** of these are true:

- The event end date was at least 60 days ago.
- The hotel name maps to a recognised, active chain.
- Either no points request exists for this event/chain combo, *or* the request status is not Received / Cancelled / Disallowed.

Like all Status Board items, you can **Ignore** the alert for a fixed period (1 month, 3 months, etc.) or until a custom date. Cancellations and Disallowed records do not trigger.

8. FAQ & Troubleshooting

Q: I clicked **Generate Points Request** but the wrong chain was selected.

The module guesses chain from the hotel name. Edit the hotel name on the pickup event so the chain is obvious (e.g. "Holiday Inn Express Stapleton" maps to IHG; just "Stapleton" does not). If the hotel really does need a custom chain (boutique, independent property), edit the request notes after generation.

Q: The .docx came out blank in the 2nd Recipient section. Bug?

Intentional. The module leaves the 2nd Recipient block blank by default. Fill in **2nd Recipient Name / Email / Phone / Member #** on the request detail page if you need to split points; they print into the form when you regenerate.

Q: The .docx auto-fill replaced "Email:" but put my email twice.

This can happen if a hotel updates their form template and the same label appears in two unrelated sections. Fix the field mapping (Hotel Points → Manage Programs → Edit) — remove the duplicate label or rename one of them in the .docx itself before re-uploading.

Q: Hilton/IHG's form URL changed.

Open **Hotel Points** → **Manage Programs** → **Edit** for that chain and paste the new URL into **Form URL**. The Web Form Helper picks it up immediately.

Q: Where can I see how many points I have earned total?

The Hotel Points dashboard shows **Points YTD** across all chains, plus a By Chain summary card with each chain's point total. For a particular chain only, click that chain's tile to filter the requests list.

Q: A team member left ConferenceDirect. What happens to their points?

Points belong to whoever's loyalty number is on the form when it was sent. The module never auto-rewrites historical records. If you need to redirect future points for a re-issued request, change the User Profile (Promagent) or Default Hotel Points Recipient (CPAinc) before clicking Resend.

Q (CPAinc): I am logged in as myself, why does the form show Kristin's name?

By design. All CPAinc points default to Kristin House — she is the **Default Hotel Points Recipient**. The form pulls its primary block from her loyalty profile, not from yours. Your own loyalty info (*Settings* → *My Hotel Points Loyalty Info*) sits ready for a future point-splitting feature but is not used on today's forms.

Q (CPAinc): How do I split a single event's points with another team member?

Per-request splitting is not yet automated. The interim workflow:

- 1 Generate the request as normal — the primary block fills with Kristin's info.
- 2 Download the .docx (Marriott / Hyatt) or open the web-form helper (Hilton / IHG).
- 3 On the request detail page, fill in **2nd Recipient Name / Email / Phone / Member #** with the other team member's info from their loyalty profile.
- 4 Click **Download .docx** again — the 2nd Recipient block fills automatically.
- 5 Send the form. Both members will receive the split per the hotel's rules.

Q (CPAinc admin): How do I change the Default Recipient permanently?

Settings → **Default Hotel Points Recipient** card → pick a different user from the dropdown → **Save Default**. From that moment, every newly generated form uses the new recipient's loyalty profile. Already-created requests are not modified; they continue to show the original recipient.

Q (CPAinc): Why is the legacy "User Profile" card still on Settings?

It is kept as a safety net. If the Default Recipient's loyalty profile is missing a value (name, email or phone), the form will fall back to those three legacy free-text fields. Once Kristin's loyalty profile is fully filled in, the legacy fields are never read.

9. Quick Reference

Navigation

Where	Path
Points dashboard	Nav bar → Hotel Points
All chain configs	Hotel Points → Manage Programs
Single chain config	Manage Programs → Edit
Import historical workbooks	Hotel Points → Import Tracking XLS
Generate a request	Pickup event → after contract upload
Single request detail	Click any row on the points dashboard
Web-form helper (Hilton/IHG)	Request detail → Open Web Form Helper
Email to hotel salesperson	Request detail → Open Email to Hotel
Mark points received	Request detail → set received date + points → Save
Resend	Request detail → Log Resend
Overdue alerts	Nav bar → Status Board (warning section)
Promagent: User Profile	Nav bar → Settings → User Profile card
CPAinc: My Loyalty Info	Nav bar → Settings → My Hotel Points Loyalty Info
CPAinc: Default Recipient (admin)	Nav bar → Settings → Default Hotel Points Recipient

Status values

Status	Meaning
Pending	Request created — not yet sent to hotel.
Submitted	Email sent. Form Sent Date is set.
Received	Points have posted. Date + amount recorded.
Cancelled	Soft-deleted (meeting cancelled, claim dropped, etc.).
Disallowed	Hotel refused the claim (e.g. past submission window).

Submission windows by chain

Chain	Submission Window	Why
Hyatt	30 days	World of Hyatt rule: 30 days after contract signature.
IHG	60 days	IHG One Rewards typical processing window.
Marriott	90 days	Bonvoy Events rule: 90 days post-event.
Hilton	90 days	Hilton Honors typical processing window.
Omni	90 days	Default — adjust if Omni publishes specific rules.
Choice	90 days	Default.
Sonesta	90 days	Default.
